```

Body

application/json

executionKind enum<string> required

The kind of gasless transaction to execute. Currently supported: rawCalls

Available options: rawCalls

data object required

Raw call parameters for the gasless transaction

Show child attributes

executionOptions object required

Options related to gas fee sponsorship, app referrer and destination calls

Show child attributes

requestId string

The request ID of the gasless transaction to execute

Response

200 application/json

Transaction successfully queued for execution

Transaction successfully queued for execution

message string

Example: `"Transaction submitted"`

RELAY

```
    }
  }
```

requestId `string`

Example: `"0xabc123..."`

200 400 401 500

```
{
  "message": "Transaction submitted",
  "requestId": "0xabc123..."
}
```
