API Reference

Get Currencies

Copy page

This api returns currency metadata from a curated list

POST https://api.relay.link / currencies / v2

Try it

cURL

cURL

```
curl --request POST \
  --url https://api.relay.link/currencies/v2 \
  --header 'Content-Type: application/json' \
  --data '
{
  "defaultList": true,
  "chainIds": [
    123
  ],
  "term": "<string>",
  "address": "<string>",
  "currencyId": "<string>",
  "tokens": [
    "<string>"
  ],
  "verified": true,
  "limit": 20,
  "includeAllChains": true,
  "useExternalSearch": true,
  "depositAddressOnly": true
}
'
```

Body

application/json

200

```
[
  {
    "chainId": 123,
    "address": "<string>",
    "symbol": "<string>",
    "name": "<string>",
    "decimals": 123,
    "vmType": "bvm",
    "metadata": {
      "logoURI": "<string>",
      "verified": true,
      "isNative": true
    }
  }
]
```

defaultList `boolean`

Return default currencies

chainIds `number[]`

Chain IDs to search for currencies

term `string`

Search term for currencies

address `string`

Address of the currency contract

---

currencyId `string`

ID to search for a currency

---

tokens `string[]`

List of token addresses, like: chainId:address

---

verified `boolean`

Filter verified currencies

---

limit `number` `default:20`

Limit the number of results

Required range: `x <= 100`

---

includeAllChains `boolean`

Include all chains for a currency when filtering by chainId and address

useExternalSearch `boolean`

Uses 3rd party API's to search for a token, in case relay does not have it indexed

depositAddressOnly `boolean`

Returns only currencies supported with deposit address bridging

Response

`200 - application/json`

List of currencies

chainId `number`

address `string`

symbol `string`

name `string`

decimals `number`

vmType `enum<string>`

Available options: `bvm` , `evm` , `svm` , `tvm` , `tonvm` , `suivm` , `hypevm` , `lvm`

metadata `object`

Show child attributes
