API Reference

Get Requests

Copy page

This API returns all the cross-chain transactions.

GET https://api.relay.link / requests / v2

Try it

cURL

cURL

```
curl --request GET \
  --url 'https://api.relay.link/requests/v2?limit=20&sortBy=createdAt'
```

Query Parameters

limit number default:20

200

Required range: 1 <= x <= 50

continuation string

user string

hash string

originChainId number

destinationChainId number

privateChainsToInclude string

id string

orderId string

includeOrderData boolean

startTimestamp number

endTimestamp number

startBlock number

```

    },
    "continuation": "<string>"
  }
```

chainId `string`

Get all requests for a single chain in either direction. Setting originChainId and/or destinationChainId will override this parameter.

referrer `string`

depositAddress `string`

Filter requests by deposit address. Returns all requests associated with this deposit address.

---

includeChildTxs `boolean`

When filtering by id, also return child transactions (e.g. duplicates, retries, refunds) linked to the original request.

---

sortBy `enum<string>` `default:createdAt`

Available options: `createdAt` , `updatedAt`

---

sortDirection `enum<string>`

Available options: `asc` , `desc`

Response

`200 - application/json`

Default Response

requests `object[]`

Show child attributes

Example:

```
