Tokens By Wallet

POST `https://api.g.alchemy.com/data/v1/{apiKey}/assets/tokens/by-address`

Fetches fungible tokens (native, ERC-20 and SPL) for multiple wallet addresses and networks. Returns a list of tokens with balances, prices, and metadata for each wallet/network combination. This endpoint is supported on Ethereum, Solana, and 30+ EVM chains. See the full list of supported networks here.

Path Parameters

apiKey string required defaults to `docs-demo`

For higher throughput, create your own API key
